

# Bio-Reactor

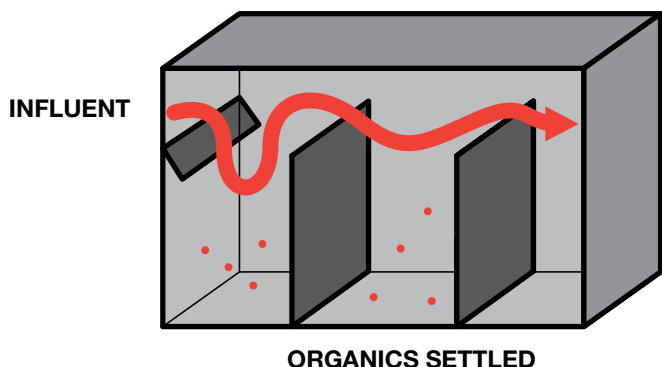

- Provides on-site treatment of liquid effluent
- Significantly reduces COD (Chemical Oxygen Demand)
- Significantly reduces TSS (Total Suspended Solids)
  - Smaller footprint due to innovative technology
  - Reduces your discharge levels and saves costs
- Endorses your corporate environmental policy and targets
  - Gives you control of your discharged effluent
    - Reduces consent issues

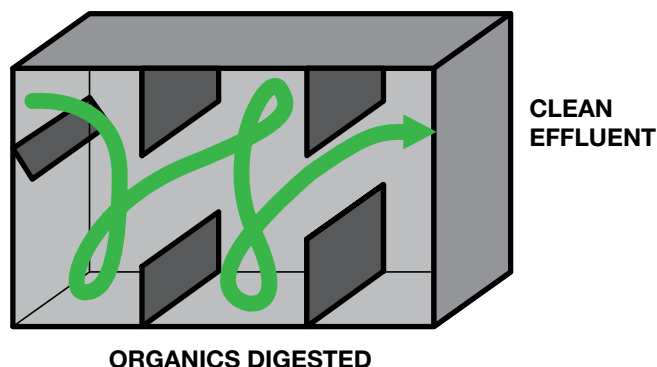

The Advetec Bio-Reactor is a purpose built unit designed and manufactured to reduce organic concentrations in liquid waste. It is an innovative product based on our knowledge and experience of invigorating indigenous bacteria within organic liquid waste. The unit is designed specifically to meet the various demands of our customers and can be tailored to suit the following requirements:

- Restricted space
- Limited access
- Effluent taken from existing drains
- Turnkey Solutions
